Saving pages

by [SteveR](#) » Wed Dec 09, 2020 1:16 pm

Greetings!

One big problem with the internet is that it's all as permanent as the websites that live on it. For my projects, one of the first things I do is to check this site to see if there is information to help keep me from reinventing the wheel. Sometimes I'll grab a snip of a picture or some text and shove it into a powerpoint deck with related information. But sometimes I want to save an entire thread.

I've tried various things, but have settled on the not very good solution of printing the page to Adobe and [saving](#) those. File-Save Page As does a terrible job so I don't do that anymore. But Chaski seems to be unique in that respect. File-Save Page As works great on most other websites. What is it about Chaski that is unique?

Is there a better way to archive information? From Websites in general? Daris Nevil and I were chatting about this because IBLS is another great information website. We didn't see a solution.

I have been trying to see what else might work.

Microsoft suggests using Onenote.

They have some info here:

<https://support.microsoft.com/en-us/off ... f953d46f1e>

I have not had a chance to try it, so not sure how well it works. It also seems you need Internet Explorer.

I will keep looking.

-Mike

OneNote link – Web Clipper

Insert notes from the web into OneNote

OneNote 2016, OneNote 2013, OneNote 2010

If you want to save information that you come across in a web search, OneNote is the perfect place for it. By using Internet Explorer and OneNote together, you can capture web pages and add them into your notes.

Use Internet Explorer to send a web page to OneNote

1. In Internet Explorer, open the page you want to capture.
2. Right-click a blank area of the page and click **Send to OneNote**.
3. In the dialog box that opens, choose a location for the page, and then click **OK**.

If you don't like the way a web page looks after you've added it to your notebook, you can undo the action by pressing Ctrl+Z.

Note: Another way to send web content to OneNote is to add the OneNote Web Clipper to your browser. It works with Internet Explorer, Edge, Chrome, Firefox, and Safari. Open your browser, and go to www.onenote.com/clipper.

Web Clipper for Firefox

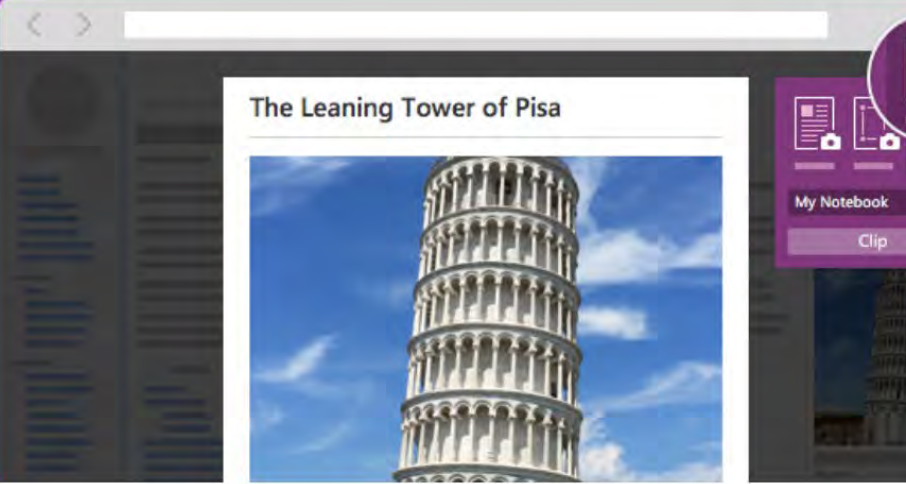

OneNote

Save anything on the web to OneNote in one click

Add the OneNote Web Clipper to your web browser so you can save, annotate, and organize anything from the web.

Get OneNote Web Clipper for Firefox

The Leaning Tower of Pisa

Capture the web

Quickly capture any webpage to OneNote, where you can easily edit, annotate, or share it.

Remove the clutter

Reduce the clutter and clip only the article, recipe, or product information you really need

Access anywhere

Access your clipped webpages on any computer, tablet, or phone - even when you're offline.

Now you have an icon in FF for easy use

Save this page as test – Right click works too!

Smokebox high temp paints

by **Chris Hollands** » Thu Apr 15, 2021 9:35 pm

I have just started the process of painting the smokebox , it is getting sandblasted tomorrow ready for the main high temp paint .
I'm using Eastmans grey manifold paint rated at 1200F .
That's the easy part , getting high temp paints in other colours is an issue and the temp ratings on spray cans can be a little misleading .
Most paints that I have seen have a temp rating of around 250C/500-600F give or take .(yes they state higher temps until you read the fine print)
What I want to know is the auxiliary items attached to the smokebox - class light brackets etc will this paint handle the exterior temps as from what I see it is real border line .
I'm sure there is a lot of views on this matter and experience - let me know what has worked for you .

Stove Bright is an exceptional high heat paint. Use their high heat red primer.

Previous discussions here have highlighted the use of "Dupli-Color" high temperature spray paints on smokeboxes, blackheads, and outside firebox sheets.
On my 1/8th scale locomotives this paint has worked perfectly over 15 years of steaming with no cracking, flaking, or need to repaint.
And their "Cast Iron" color accurately replicates the old steam cylinder oil + graphite coatings. I have applied lots of that during my full-sized steam locomotive days.
That color may or may not be appropriate for your locomotive. Other colors are available.

Web Clipper Interface

The screenshot displays the Web Clipper interface, which is a purple overlay on the right side of a web browser window. The background shows a forum page titled "Smokebox high temp paints" from "The Home Machinist!". The forum post is by Chris Hollands, dated Thu Apr 15, 2021 9:35 pm. The post content discusses the process of painting a smokebox and the importance of high-temperature paint. The Web Clipper interface has a purple header with the title "Full Page". Below the header, there is a section for "Smokebox high temp paints - The Home Machinist!". This section includes a link to "Add a note..." and the URL "Clipped from: https://www.chaski.org/homemachinist/viewtopic.php?f=8&t=110583". The main body of the clipper shows a preview of the forum post, including the forum header, the post content, and a list of replies. The sidebar on the right of the clipper contains several options: "Full Page", "Region", "Article", and "Bookmark". There is also a "Location" section with a dropdown menu showing "Stephen's Notebook > Quick ...". At the bottom of the sidebar, there is a "Clip" button and a "Feedback?" link. The user's name "Stephen Ruatta" and email "sruatta@aol.com" are also visible.
